Activity 4: Reproduction & lifecycles

Animals growing up

'Hi guys! Fezziwig the barn owl here! In today's activity we are learning about growing up! Some animals like Asian short-clawed otters don't change too much and, as pups, look like a smaller version of the adults. Other animals like polar bears and owls like me change a lot as they grow up! Humans change too, they grow taller and grow more hair! In the blank boxes draw or find a photo of the named animal at the baby, adolescent or adult life stage. Here is an example of me!'

Baby
